

**TB-0366**

**SUBMIT FUNCTION AND RELEASE OPTION  
ADDED TO THE L.CICS DIALOGUE**

Issue Date: September 1, 2005  
Effective Date: September 6, 2005  
Section/Group: Systems Programming  
Submitted by: Michael Knorr  
Approved by: Clair Christensen

---

A new "submit" function has been added to the mainframe's State of Utah Compiler Dialogue. Access the dialogue by specifying the keyword CICS in the ISPF "Local" panel (L.CICS) and the submit function becomes available through Option 2 (Maintain Stored Job Streams). Compile JCL (from an existing job stream) can be regenerated with the new "s" line command, bypassing intervening panels displayed by the "u" update line command. Program compiles not requiring changes to SYSLIBs, version/release levels, etc., can be quickly created and submitted.

In addition, CICS program compiles no longer require a release level upon initial JCL generation. At the "Release level of CICS to access:" field, a new value of "Any" is allowed. Compile JCL generated with "Any" uses the most current production release of CICS available at the State of Utah. Use of "Any," along with the above "s" submit function, allows valid JCL to be generated for program "compiles" over time through multiple releases of CICS.
